

Continental at TOC Europe 2024: Empowering Ports With Intelligent Tires and Digital Solutions

PUBLISHED MAY 6, 2024
BY [CONTINENTAL AG](#)

At TOC Europe 2024, Continental will present its intelligent tire and service portfolio geared toward facilitating ports' digital transition

- Highlights: DockMaster+, TerminalMaster and scalable digital tire management system ContiConnect

- Federico Jiménez, Head of Port Operation Tires Business Field:

Digital solutions are the key to sustainable ports. We are committed to supporting this smart port evolution with a portfolio that combines adaptability, efficiency and environmental responsibility.

Hanover, Germany, May 7, 2024. At this year's TOC Europe in Rotterdam, Netherlands, Continental will advocate for a digital transformation in port operations and present tire and digital technologies that fulfill its vision of "Smart Port – Better Flow". Product highlights like the DockMaster+ and the TerminalMaster tires showcase the performance and reliability of its port tire portfolio. Federico Jiménez, Head of the Port Operation Tires Business Field explains:

We firmly believe that digital solutions – seamlessly intertwined with high-end tire technologies – are the key to sustainable ports. We are committed to supporting this smart port evolution with a portfolio that combines adaptability, efficiency and environmental responsibility.

TOC Europe 2024 will take place from June 11 to 13, 2024. Visitors will find Continental at booth H64 in hall 1.

Scalable digital solutions enable modern port operations

Continental offers an integrated product range of V.ply, radial and solid tires specially tailored to the demanding environment of a port terminal. For the first time, Continental will present a complementary digital solution portfolio unique to the port segment. It consists of tailor-made scalable solutions suited to different application situations, such as ContiConnect, the reliable fleet management platform for large port operation fleets and ContiConnect Lite, a leaner free-of-charge version for mobile devices that does not require any additional hardware other than the Gen2 tire sensor. There is also Continental's new entry-level solution: the new Valve Cap Sensor for efficient tire pressure monitoring and with easy installation directly at the tire valve. With these three adaptable solutions, port operators can achieve greater sustainability and efficiency based on their individual fleets' needs. Teck Seng Chew, Product Manager for Port Operation Tires, gives an outlook on the trade fair:

We are looking forward to three exciting days where we will show that our intelligent tires are an indispensable part of the digital infrastructure of a smart port.
