BY [EUROPA](#)

Coolset has introduced its EU Taxonomy framework to help mid-market companies comply with evolving regulations like CSRD and EU Taxonomy.

[For immediate release]

Coolset, a Dutch market leader in sustainability management software, has launched its EU Taxonomy framework, a solution designed to help mid-market companies comply with evolving regulations like the Corporate Sustainability Reporting Directive (CSRD) and EU Taxonomy.

Growing regulatory challenges for mid-market companies

The EU Taxonomy defines which business activities qualify as environmentally sustainable and plays a central role in CSRD, requiring companies to report how much of their revenue, CapEx, and OpEx align with sustainability objectives.

While large corporations have dedicated compliance teams and substantial resources, mid-market companies face unique hurdles, including limited sustainability expertise, constrained budgets, and reliance on fragmented tools. As regulations evolve, compliance becomes increasingly complex.

How Coolset helps companies comply with EU Taxonomy

Coolset's EU Taxonomy framework provides companies with a structured, guided approach to sustainability compliance. Built for adaptability, the platform ensures companies remain aligned with

evolving regulations—without adding unnecessary complexity.

With Coolset, companies can manage both CSRD and EU Taxonomy compliance in one place, ensuring data consistency, centralized documentation, and cross-team collaboration within a single platform.

With Coolset, companies can:

- **Identify eligible activities** – Map business operations to EU Taxonomy criteria using guided workflows.
- **Assess alignment** – Evaluate alignment with sustainability standards, DNSH rules, and minimum safeguards.
- **Generate audit-ready reports** – Calculate and report Taxonomy-aligned CapEx, OpEx, and turnover.
- **Enhance credibility with supporting evidence** – Link documentation to the relevant sections of the EU Taxonomy report, ensuring complete, audit-ready disclosures.

EU Omnibus: How software helps businesses navigate regulatory uncertainty

The sustainability world is now awaiting the introduction of the EU Omnibus, a regulatory package aimed at increasing transparency and simplifying reporting. Expected on February 26, 2025, these updates will significantly impact compliance frameworks like the EU Taxonomy, bringing changes to materiality thresholds, reporting obligations, and assurance standards.

While designed to streamline compliance, the European Commission's move signals a broader reality—regulations will continue to evolve. For companies already stretched thin by limited resources and expertise, this growing uncertainty creates an added burden.

"Many companies still rely on spreadsheets or external consultants for sustainability reporting, but with regulations constantly evolving, this approach is quickly becoming obsolete. The ability to adapt swiftly, independently, and at scale is now essential to reducing compliance risk," said Konstantinos Kouzelis, CEO of Coolset.

According to Konstantinos, Coolset is uniquely positioned to keep customers compliant thanks to its built-to-adapt architecture, which enables rapid responses to regulatory updates.

"With Coolset, companies are guided through compliance and updated whenever regulations change. This eliminates the need to track new rules manually or rely on costly consultants," he added.

As sustainability regulations tighten, businesses must embrace scalable, automated solutions to stay compliant and reduce risk. Coolset's EU Taxonomy framework helps companies stay ahead of regulatory changes and confidently manage sustainability reporting.

About Coolset

Coolset is the Dutch market leader in sustainability management software, helping mid-market companies streamline sustainability reporting and ensure compliance with frameworks like CSRD and EU Taxonomy. With TÜV Rheinland-certified methodology and audit-ready reports, Coolset enables businesses to measure their carbon footprint, comply with the latest regulations, and build long-term internal expertise—all in one intuitive platform.
