ONCE chooses Telefónica Tech to migrate its services to the Cloud

PUBLISHED MAY 29, 2023
BY TELEFÓNICA

ONCE has relied on the capabilities of Telefónica Tech to migrate its services to the Cloud and benefit from a more efficient and secure environment with which to meet the new storage and processing challenges of its sector.

The technology company has transferred the ONCE platform to the Virtual Data Center (VDC) infrastructure, the Telefónica Tech cloud where customers can choose the management model that best suits their needs and which also includes comprehensive communication and cybersecurity services. In this way, ONCE can enjoy a flexible, secure and pay-per-use Cloud model that guarantees the continuity of its business.

Telefónica Tech has also provided its professional and managed services to design a future plan that allows ONCE to evolve this Cloud proposal based on VDC towards hybrid environments thanks to the strategic alliances it has with hyperscalars (AWS, Microsoft Azure and Google Cloud).

This evolution to hybridisation will bring additional operational efficiencies to ONCE, both in terms of costs and from the incorporation of other technologies (Big Data, Artificial Intelligence, containers...), as well as expanding the possibilities of innovation for the deployment of digital services that will benefit all the people affiliated with the Organisation and the customers of its social lottery products that it markets as an operator committed to safe and responsible gambling.

Javier Merino, Technical Director of Systems and Information Technology at ONCE, said:

> A transition project to a new infrastructure is a technical and management challenge. The Telefónica Tech team has demonstrated both its technological capacity to carry it out efficiently and its commitment to our objectives, providing

> innovative solutions and guaranteeing, at all times, the continuity and security of all the Organisation's processes

María Jesús Almazor, CEO of Cloud and Cyber Security at Telefónica Tech, said:

> Our multi-cloud proposal, based on our own infrastructures and the strategic alliances we have with the main hyperscalars, allows us to offer public and private organisations the Cloud solutions that best suit their needs, placing each workload in the right place. We are very proud that ONCE has chosen us to accompany them on their journey to the cloud, because it is a very important step in expanding their processing and storage capacity and driving the digital transformation of their business
