

Multi-Country – Acute, severe hepatitis of unknown origin in children

PUBLISHED APR 24, 2022
BY [WORLD HEALTH ORGANIZATION](#)

Since the WHO Disease Outbreak News on Acute hepatitis of unknown aetiology – the United Kingdom of Great Britain and Northern Ireland was published on 15 April 2022, there have been continuing further reports of cases of acute hepatitis of unknown origin among young children. It is not yet clear if there has been an increase in hepatitis cases, or an increase in awareness of hepatitis cases that occur at the expected rate but go undetected. While adenovirus is a possible hypothesis, investigations are ongoing for the causative agent.
